ERRATUM

In the Data Reduction Section, a term has been forgotten during the writing process of the weighted differential magnitude ($\Delta m$) of the asteroid. The right Eq. (3) is the following one:

$$\Delta m = m_a - \sum_{i=1}^{N} \left[ \frac{m_{a,i}}{\sigma_{a,i}^2} \right] \left[ \frac{1}{\sigma_{a,i}^2} \right]$$
